Taking note also of recent initiatives that aim to help Governments, firms and farmers to mitigate and build capacity to manage the risks associated with excessive food price volatility, in particular in the poorest countries,

Recognizing the need to support a comprehensive and coordinated response in order to address the multiple and complex causes of excessive price volatility of food and related commodities in financial markets,

Deeply concerned by excessive volatility of commodity prices and by the impact that excessive price volatility has on food security and sustainable development in developing countries, and, in particular, by the fact that many commodity-dependent developing countries and economies in transition continue to be highly vulnerable to excessive price fluctuations, and recognizing the need to improve the adequate regulation, functioning and transparency of financial and commodity markets in order to address excessive commodity price volatility,

Reiterating that the international financial system should support sustained, inclusive and equitable economic growth, sustainable development, and hunger and poverty eradication efforts in developing countries, while allowing for the coherent mobilization of all sources of financing for development,

Taking note of the report of the Secretary-General entitled “Agriculture development and food security: progress on the implementation of the outcome of the World Summit on Food Security”, which inter alia, highlights the significant increase in the financialization of commodity markets since about 2004, as reflected in rising volumes of financial investments in commodity derivatives markets,¹⁰
